a Sites on the replicon
free initiator
bound
auto-
repression
rep
m iterons
(ori)
replication
∝ x_f
+ rep
+ m sites
handcuffing
rep
rep
initiation
blocked
synthesis
∝ n, bursts
dilution
∅
reservoir $M = nm$ co-scales with n
b Fixed reservoir
M sites, not replicated
ori
rep
+ rep only
co-scaling attenuates a copy-number
fluctuation; a fixed reservoir amplifies it
